

Luís Marques is an assistant professor at the department of physics of the University of Minho. He is the head of the Computational Physics Lab at the centre of Physics of Minho and Porto Universities (CF-UM-UP), where he develops his research activity with emphasis on materials simulation, modelling of plasma sources with applications in materials processing, development of new devices for energy and biomedical applications. His main motivation is linking fundamental and applied research in the development of new material concepts and processing technologies, design of new devices, using modelling/simulation techniques, such as - Density Functional Theory, Molecular dynamics, Particle In Cell/Monte-carlo, Dissipative Particle Dynamics, finite element methods.
