

Sergi Girona holds a PhD in Computer Science from the Technical University of Catalunya. He joined BSC in 2004 for the installation of the first MareNostrum in Barcelona, which was at that time the largest supercomputer in Europe; Sergi was responsible of its architecture as well as of the site preparation; he was also responsible for the fourth subsequent versions of the supercomputer. His role today includes managing the Operations group with the responsibilities of User Support and System Administration of the different HPC systems at BSC.

Currently, he is also leading the planning and installation of the fifth version of MareNostrum, a pre-exascale supercomputer that the BSC will host after being selected by the EuroHPC Joint Undertaking for this purpose.
